Petpost Premium
Coconut Oil for Dogs
is cold-pressed from
the highest quality
100% certified organic
coconuts. Each coco-
nut was grown with
your dog in mind from
the very beginning.
Some people say we
are crazy about our
dogs. They are right.

Why is Coconut Oil Healthy for My Dog?

It seems strange right? Oil isn't usually considered good for very much besides being delicious for your Archibald. It is true that coconut oil is delicious, but our premium coconut oil is superpowered by something we don't usually consider to be healthy: fat.

Coconut oil is made up of more than 90% saturated fat, so it is hard to believe that it is actually considered a superfood. Most beginner coconut oil fiends are usually skeptical of it for this reason. Saturated fats are often considered the bad type of fat, and for the most part, they are. However, the Petpost Coconut Oil for Dogs has a very powerful & nutritional secret weapon: medium chain triglycerides, or MCT's. MCT's are a good type of fat that is made up of Lauric Acid, Capric Acid, Caprylic Acid, Myristic Acid and Palmitic.

By hand-picking each coconut we can make sure that only the ones that are fresh, healthy, and well... loaded with fat are going to be anywhere near our dogs.

So what makes MCT's so good?

Some of the health benefits associated with the MCT's found in the Petpost Coconut Oil for Dogs are:

- **digestion improvement**
- **immune system support**
- **increased metabolic functions**
- **improved skin and coat health**
- **antifungal, antibacterial, and antiviral properties**

Just taking a moment to reflect on the list of benefits above, you can see why coconut oil is so popular with veterinarians. In particular, most chemical or natural products do not contain antifungal, antibac-

Follow these instructions to get little Pickle to enjoy the most out of his new jar of Coconut Oil.

Here's what you need:

- **Petpost** Coconut Oil for Dogs
- A measuring spoon*
- A comfortable dog sweater*
- About 5 minutes

* There's a few ways to use your new goodies on Monseigneur Snubbles. Depending on which direction you take, and your dog's sensitivities, you might not need all of these supplies.

Instructions for Feeding:

The most common use of the Petpost Coconut Oil for Dogs is to use it as a supplement and add it to their diet. When treating Mr. Snuggles, you need to move forward slowly, because adding too much coconut oil to your dog's diet at once can make them a bit sick to the stomach. If you've given old Pumpernickel too much you will know by the diarrhea or greasy stools that will inevitably follow.

- Start with 1/4 teaspoon per day for small dogs or puppies under 2 years old.
- Start with 1 teaspoon per day for large dogs.
- After a few weeks of this initial small dosage, you can gradually begin adding more. As a general rule, the optimal dose of coconut oil for your dog is about **1 teaspoon per 10 pounds of body weight.**
- The best part about the Petpost Coconut Oil for Dogs is that Maximus is going to love the stuff. You can add dry or liquid spoonfuls directly to your dog's food.
- If you begin to notice any diarrhea or unusual bowel movements, stop the treatment immediately and go back to the lower amount. This is not cause for any serious concern, but you are using too much coconut oil for your.

Small Dogs 	1/4 teaspoon 
Big Dogs 	1 teaspoon 

Instructions for Topical Use:

So, Fluffernutter has a patch of dry, flaky, itchy skin that has been driving the poor boy crazy, huh? Don't worry, applying this product topically is super easy and highly effective. We recommend supplemental feeding *and* topical use for dogs that are suffering from skin problems. The most difficult part of treating your pup's skin is going to be preventing licks. This stuff is so delicious, your dog just can't get enough.

- Warm up the coconut oil to room temperature or a bit warmer until it is a clear liquid.
- Rub some of the oil onto your hands.
- Gently but thoroughly massage the miracle liquid into your pups skin and fur, paying special attention to any problem areas where itchiness or irritation occur.
- In addition to all of the problem areas, go ahead and rub your hands through the outer layers of your dogs fur and belly for nice even coverage.
- Put a comfortable sweater or shirt on your dog so that the oil can set. If you are just applying to a problem area like chapped paws, you can temporarily wrap them in a clean towel to prevent licking.
- Repeat every day, you will start to see results within just a few treatments.

Now that you and Prince Charles are feeling a lot better, here are a few more benefits that coconut oil could have on your dog:

Taken Orally as a Supplement:

- Keeps Skin Hydrated and Healthy
- Bodywide antibacterial, antiviral and anti-fungal
- Assists with weight loss by reducing hunger and increasing energy usage
- Reduces odor from bad breath
- Increases nutrient absorption
- Controls colitis and inflammatory bowel syndrome
- Improves ability to control diabetes
- Reduces arthritic problems
- Increases energy and mood

Applied Directly to Skin and Coat

- Moisturizes dry skin and eczema
- Aids itchiness from flea allergies and contact dermatitis
- Improves doggie scent
- Conditions fur for sleek coats
- Treats and prevents yeast and fungal infections
- Promotes wound or hot spot healing

The benefits of the
Petpost Coconut Oil
for Dogs are most
effective when
applied by a loving
dog owner.

From now on,
that'll be you.
