

UPET ASSEMBLY INSTRUCTIONS

1. Remove UPET from bag and spread the base of the UPET evenly on the ground.
2. Click the 4 legs into the straight locked position and hold the two pieces of cord over the center hub of the structure.
3. At this point give the UPET a shake in order to loosen and fan out the structure. Hold and steady the center hub with one hand and pull the 2 pieces of cord simultaneously with the other hand in an upward direction.
The lower half of the hub should now locate into the top half.

NOTE: It is important NOT to force this stage as this may damage the mechanism. If resistance is experienced, simply lower the mechanism, gently shake the UPET, and try again.

4. The UPET is now opened and ready to use. To secure in wind, use the stakes if necessary.

UPET COLLAPSING INSTRUCTIONS

1. Remove stakes and belongings from inside the shelter.
2. Place hands on either side of the lower hub poles (horizontal) and gently push down. See Fig. 4
3. The 4 legs can now be collapsed in half at the mid-section and up.

NOTE: If you drop the center hub or it falls over during the collapsing process, check that the arrows at the mid-section joints are facing upwards and have not twisted. Otherwise the poles or joints may snap as a result.

4. Roll the Fabric around the collapsed structure, pushing air gently out. Then pack into the bag.

CARE: Never force parts, as this will result in damage or breaking of the mechanism. If resistance is experienced, release, shake, and start over.
