ADVANTAGE MULTI® (imidacloprid + moxidectin) Topical Solution

One-month topical treatment is indicated for the prevention and treatment of Flea (Ctenocephalides canis) infestations in dogs, as well as heartworm (Dirofilaria immitis) infection at any one location that could run off the side of the backline from the base of the neck to the upper back in an area of the dog that will be 100% treated by the vehicle. Spot-on administration is effective against both adult and immature heartworms at the recommended dose level. During the first three months after treatment, heartworms in dogs may continue to mature and become diethylcarbamazine-resistant, which may increase the risk of heartworm infections. The drug treatment is continued regardless of the presence or absence of clinical signs. If the dog is known to be heartworm positive, it is recommended to follow the manufacturer’s instructions for heartworm treatment. If heartworm treatment is not started immediately after the dog is known to be heartworm positive, it is recommended to repeat the heartworm treatment. The drug treatment is continued regardless of the presence or absence of clinical signs. If the dog is known to be heartworm positive, it is recommended to follow the manufacturer’s instructions for heartworm treatment. If heartworm treatment is not started immediately after the dog is known to be heartworm positive, it is recommended to repeat the heartworm treatment.

During the period of treatment, the dog is at risk for developing heartworm infection. The drug treatment is continued regardless of the presence or absence of clinical signs. If the dog is known to be heartworm positive, it is recommended to follow the manufacturer’s instructions for heartworm treatment. If heartworm treatment is not started immediately after the dog is known to be heartworm positive, it is recommended to repeat the heartworm treatment. The drug treatment is continued regardless of the presence or absence of clinical signs. If the dog is known to be heartworm positive, it is recommended to follow the manufacturer’s instructions for heartworm treatment. If heartworm treatment is not started immediately after the dog is known to be heartworm positive, it is recommended to repeat the heartworm treatment. The drug treatment is continued regardless of the presence or absence of clinical signs. If the dog is known to be heartworm positive, it is recommended to follow the manufacturer’s instructions for heartworm treatment. If heartworm treatment is not started immediately after the dog is known to be heartworm positive, it is recommended to repeat the heartworm treatment.
