VETORYL® CAPSULES  
(trilostane)

VETORYL Capsules are a prescription drug for dogs.

Hyperadrenocorticism (also known as Cushung's disease) is a condition in which excess levels of the hormone cortisol are produced. Cortisol is normally released from the adrenal gland into the bloodstream at times of stress. In dogs with hyperadrenocorticism, the level of cortisol produced is excessive and, if left untreated, becomes incapacitating.

Characteristics signs are:
- Pale, large quantifies of urine
- Frequent urination and possible incontinence
- Polydipsia (excessive thirst)
- Ravenous appetite
- Lethargy or decreased activity
- Excessive panting
- Pot belly
- Thin skin
- Hair loss or recurrent skin diseases
- Muscle wasting

Your dog may not necessarily display all of these signs.

What should I talk to my veterinarian about before giving VETORYL Capsules?

Periodic follow-up and laboratory testing are important for continual safe use of VETORYL Capsules. Talk with your veterinarian about:

- What tests might be done before VETORYL Capsules are prescribed.
- How often your dog may need to be examined by your veterinarian.
- The risks and benefits of using VETORYL Capsules.
- Your dog's medical history or any other medical problems or allergies that your dog has now or has had.
- Any medications your dog is taking, including over-the-counter products and nutritional supplements.

What are the possible side effects that may occur in my dog during therapy?

VETORYL Capsules, like other drugs, may cause some side effects. Serious side effects have been reported in dogs taking VETORYL Capsules. Serious side effects can occur with or without warning and result in death.

Side effects generally involve an over suppression of the adrenal glands (hypoadrenocorticism, also known as Addison's Disease). Look for the following side effects that may indicate your dog is having a problem with VETORYL Capsules or may have another medical problem:
- Depression, lethargy or decrease in activity
- Change in bowel movements (such as diarrhea or loose stools)
- Vomiting
- Weakness and collapse
- Hair loss or recurrent skin diseases
- Muscle wasting
- Polydipsia (excessive thirst)
- Polyuria (excessive urination)

Your veterinarian will determine if your dog is responding as expected and if your dog should continue receiving VETORYL Capsules. As VETORYL Capsules control the hyperadrenocorticism, there should be a decrease in food and water consumption to normal levels. There should also be resolution of excess urination. If, however, there is a dramatic decrease in appetite or your dog stops drinking water, it could be an indication of a side effect requiring treatment.

What kind of results can I expect when my dog is on VETORYL Capsules?

Although VETORYL Capsules ARE NOT A CURE for hyperadrenocorticism, the product can control the clinical signs:
- Response varies from dog to dog.
- Improvement can be seen in most dogs within a few weeks.
- If VETORYL Capsules are discontinued or not given as directed, excess cortisol production can resume and the signs of hyperadrenocorticism can return.

What should I do in case my dog takes more than the prescribed amount of VETORYL Capsules?

Contact your veterinarian immediately if you think your dog has a medical problem or side effect from VETORYL capsules therapy. If you have additional questions about possible side effects, talk to your veterinarian.

It is important to stop therapy and contact your veterinarian immediately if you think your dog has a medical problem or side effect from VETORYL capsules therapy. If you have additional questions about possible side effects, talk to your veterinarian.

As VETORYL capsules control the hyperadrenocorticism, there should be a decrease in food and water consumption to normal levels. There should also be resolution of excess urination. If, however, there is a dramatic decrease in appetite or your dog stops drinking water, it could be an indication of a side effect requiring treatment.

Although VETORYL Capsules ARE NOT A CURE for hyperadrenocorticism, the product can control the clinical signs:
- Response varies from dog to dog.
- Improvement can be seen in most dogs within a few weeks.
- If VETORYL Capsules are discontinued or not given as directed, excess cortisol production can resume and the signs of hyperadrenocorticism can return.

Which dogs should not take VETORYL Capsules? Your dog should not be given VETORYL Capsules if he/she:
- Has kidney or liver disease.
- Takes certain medications. VETORYL Capsules should be used with caution with several medications used to treat heart disease (some diuretics and ACE inhibitors).
- Is pregnant or trying to become pregnant.

Tell your veterinarian about all medicines you have given your dog in the past, and any medicines that you are planning to give with VETORYL Capsules. This should include other medicines that you can get without a prescription. Your veterinarian may want to check that all of your dog’s medicines can be given together.

What should I know about giving VETORYL Capsules to my dog?

VETORYL Capsules should be given according to your veterinarian’s instructions. Your veterinarian will tell you the number of VETORYL Capsules that is right for your dog.

How often your dog may need to be examined by your veterinarian.

The risks and benefits of using VETORYL Capsules.

Tell your veterinarian about:
- Any other medical problems that your dog has now or has had.
- Any medications your dog is taking, including over-the-counter products and nutritional supplements.

What are VETORYL Capsules?

VETORYL Capsules contain an adrenocortical suppressant drug that is used to treat hyperadrenocorticism in dogs.

Generic name: trilostane ("try-low-stain")

VETORYL Capsules (pronounced “vet-or-ill”) Capsules

This summary contains important information about VETORYL Capsules. You should read this information before you start giving your dog VETORYL Capsules and review it each time the prescription is refilled. This sheet is provided only as a summary and does not take the place of instructions from your veterinarian. Talk to your veterinarian if you do not understand any of this information or if you want to know more about VETORYL Capsules.

Tell your veterinarian about:

**Generic name:** trilostane ("try-low-stain")

**VETORYL** (pronounced "vet-or-ill") Capsules

**What are VETORYL Capsules?**

VETORYL Capsules contain an adrenocortical suppressant drug that is used to treat hyperadrenocorticism in dogs. VETORYL Capsules are a prescription drug for dogs.

**Hyperadrenocorticism** (also known as Cushings disease) is a condition in which excess levels of the hormone cortisol are produced. Cortisol is normally released from the adrenal gland into the bloodstream at times of stress. In dogs with hyperadrenocorticism, the level of cortisol produced is excessive and, if left untreated, becomes incapacitating.

**Characteristic signs are:**

- Passing large quantities of urine
- Frequent urination and possible incontinence
- Excessive thirst
- Increased appetite
- Ravenous appetite
- Leanness or decreased activity
- Excessive panting
- Pot belly
- Thin skin
- Hair loss or recurrent skin diseases
- Muscle wasting

Your dog may not necessarily display all of these signs.

**What should I talk to my veterinarian about before giving VETORYL Capsules?**

Periodic follow-up and laboratory testing are important for continued safe use of VETORYL Capsules. Talk with your veterinarian about how often your dog will need to be examined.

Talk to your veterinarian about:

- What tests might be done before VETORYL Capsules are prescribed.
- How often your dog may need to be examined by your veterinarian.
- The risks and benefits of using VETORYL Capsules.

Tell your veterinarian if your dog has ever had the following medical problems:

- Liver disease
- Kidney disease
- Any other medical problems or allergies that your dog has now or has had.
- Any medications your dog is taking, including over-the-counter products and nutritional supplements.

**What are the possible side effects that may occur in my dog during therapy?**

Side effects generally involve an over suppression of the adrenal glands (hyperadrenocorticism, also known as Addison’s Disease). Look for the following side effects that may indicate your dog is having a problem with VETORYL Capsules or may have another medical problem:

- Depression, lethargy or decrease in activity
- Change in bowel movements (such as diarrhea or loose stools)
- Vomiting
- Weakness and collapse
- Loss of appetite or your dog stops drinking water, it could be an indication of a side effect requiring treatment.

**Improvement can be seen in most dogs within a few weeks.**

**Response varies from dog to dog.**

**As VETORYL Capsules control the hyperadrenocorticism, there should be a decrease in food and water consumption to normal levels.**

**There should also be resolution of excess urination.**

**However, if there is a dramatic decrease in urination, it could be an indication of a side effect requiring treatment.**

As with all prescribed medicines, VETORYL Capsules should only be given to the dog for which it was prescribed.

**Tell your veterinarian about all medicines you have given your dog in the past, and any medicines that you are planning to give with VETORYL Capsules.**

This should include other medicines that you can get without a prescription. Your veterinarian may want to check that all of your dog's medicines can be given together.

**What should I know about giving VETORYL Capsules to my dog?**

- VETORYL Capsules should be given according to your veterinarian’s instructions. Your veterinarian will tell you the number of VETORYL Capsules that is right for your dog.
- Adulter with food.
- Do not open capsules and do not attempt to split or divide capsules.
- Wash hands after use.
- Do not handle the capsules if pregnant or trying to become pregnant. Studies in laboratory animals have produced birth defects and early pregnancy loss. In the event of accidental ingestion/overdose, seek medical advice immediately and take the labeled container with you.

**What do I do in case my dog takes more than the prescribed amount of VETORYL Capsules?**

As VETORYL Capsules control the hyperadrenocorticism, there should be a decrease in food and water consumption to normal levels. There should also be resolution of excess urination. If, however, there is a dramatic decrease in urination, it could be an indication of a side effect requiring treatment.

**What kind of results can I expect when my dog is on VETORYL Capsules?**

**Although VETORYL Capsules ARE NOT A CURE for hyperadrenocorticism, the product can control the clinical signs:**
