Kindly Reminder

A small number of dogs will display irritability when wearing a spray bark stopping device, and confused about spray warnings or uncertain how to avoid, you need to gently guide and comfort your pet, use proper methods to guide the dogs to adapt to spray warnings. After your guidance several times, the dog will adapt quickly.

1.The device is suitable for all large, medium and small dogs and shall no be used for any other purpose not described in this manual.

2.Too long time use of the device on the dogs, it will cause a condition, similar to bedsores, ie. Compressive skin necrosis, to reduce this possibility, please refer to following method;

· 6 ·

A: Regularly check if there is any rash or pain anywhere on the neck of the dogs.

B: Please monitor your dog within the first two days.

C: Make real time inspection of the device to prevent excessive pressure, and one finger should be able to be placed between the device and the dog's neck.

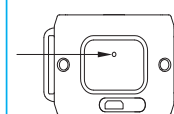

D: Regularly scrub around the dog's neck and the device's sensor head weekly.

E: Do not attempt to remove or repair any parts of the device, which otherwise will make the warranty invalid.

· 7 ·

F: If your dog has extreme resistance or dangerous movement against wearing this device, stop using it immediately after the guidance is invalid.

G: We recommend the use of this device for dogs aged 6 months and weight over 8 pounds.
 H: This device should not be used continuously for 12hours with 24 hours.

Testing Tips

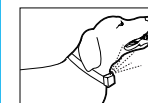

Turn on the device and "shout in a row" at the receiving hole on the back of it, if it sprays, it is workable.

· 8 ·

How to wear the collar

1. Wear the collar on the dog's neck, adjust the collar belt according to the size of the neck of your dog, and remove the remaining part of the collar. Collect wearing is the prerequisite for effective use.

2. If you dog with long hair, it is necessary to trim the hair on the spray path to ensure that the mist can be sprayed to an effective range.

· 9 ·

3. Make sure the spray nozzle aligned perpendicularly to the dog's nose, and criterion wearing is based on the extent that one finger can be accommodated between the collar and the dog's neck. this can accurately identify the frequency of the dog's barking. Correct Installation is very important, too much relaxation of the device will lead to uncoordinated action and affect the normal operation of the product
