The collar should be worn continuously for the 8 month protection period. Check periodically and adjust, especially when puppies are rapidly growing. Rarely, mild application site reactions may occur, such as scratching, redness and hair loss, which usually recover within 1-2 weeks without the need for collar removal. In some cases, temporary collar removal and bathing may be recommended if certain conditions have disappeared. In very rare cases, application site reactions such as dermatitis, inflammation, eczema or lesions may occur. In these instances, collar removal is recommended. If signs persist, or become more severe, consult a veterinarian immediately.

This collar is designed with a safety-closure mechanism. In the unlikely event of a dog being trapped, the dog’s own strength is sufficient to widen the collar to allow for quick release. Replace the collar after 8 months for optimal tick and flea protection.

PRODUCT INFORMATION
Kills fleas which may cause flea allergy dermatitis (FAD) or flea bite hypersensitivity (FBH). Seresto kills existing fleas on dogs within 24 hours. Reinfesting fleas are killed within 2 hours with protection against further flea infestation lasting eight (8) months. Pre-existing pupae in the environment may continue to emerge for six (6) weeks or longer depending upon the climatic conditions. Seresto aids in the control of flea larvae in the dog’s surroundings following contact with a Seresto-treated dog.

Ticks already on the dog prior to treatment may not be killed immediately after collar application and may remain attached and visible. At the time of application, remove ticks already on the dog. The prevention of infestations with new ticks starts within 48 hours after application of the collar. Re-infesting ticks are repelled and/or killed as quickly as 6 hours.

Kills lice on dogs. Aids in the treatment and control of Sarcoptic mange.

DIRECTIONS FOR USE
It is a violation of Federal Law to use this product in a manner inconsistent with its labeling. Do not contaminate feed or food.

HOW TO APPLY
One collar per animal to be fastened around the neck. Remove collar from protective bag directly before use. Unroll collar and make sure that there are no remnants from the plastic connectors inside the collar.

Insert end of the collar through the buckle. Adjust the collar around the animal’s neck without tightening it too tight (as a guide, it should be possible to insert 2 fingers comfortably between the collar and the neck). Pull collar across chest through the loop(s) and cut off any excess length extending 1 inch (2 cm) beyond the loop(s), unless it is on a growing puppy, where some additional length may be needed for adjustment as the animal grows.

After application of the collar, three reflector clips may be fixed permanently to the collar to increase the animal’s visibility in the dark. Take the clips out of the bag. The clips should be evenly distributed on the non-overlapping part of the collar. The clips are correctly applied when a clicking sound is heard. For safety reasons once the reflectors are fixed to the collar the clips closes permanently and cannot be re-opened.
