

SmartCat Kitty's Garden

– Growing Instructions

Contents: 100% organic USA seeds and soil. Contains no vermiculite or other ingredients potentially known to be harmful to cats.

Instructions for Use

- 1. Remove the netting from pellets and replace into each compartment.*
- 2. Pour 3 ounces of warm water onto each pellet in your planting container.*
- 3. Wait 10 minutes for the pellets to absorb the water.*
- 4. Remove about 1 teaspoon of soil from each pellet and set aside*
- 5. Open seed pack on back perforation and stir seeds into the soil one at a time.*
- 6. Using the soil that you set aside in step 4 cover the seeds and lightly pack down.*
- 7. Add water if necessary to keep soil and seeds moist- however, over watering can lead to a fungal or mold growth. Drain any excess water from the bottom tray.*
- 8. Do not allow the seeds to dry out. Lightly mist your garden daily to keep the seeds moist.*
- 9. Keep in a location that is between 65-70° F. – Some seeds will sprout faster than others.*
- 10. When the grasses are 3" - 4" tall, you can treat your kitty to its garden!*
